New ABAC Piston Brochure

ABAC UK reveal new piston compressor brochure

ABAC UK is the countries leading supplier of professional air compressors. The range of direct drive and belt drive piston compressors has established a reputation as the premier product in this sector satisfying the needs of professional tradesman along with those of industrial and automotive workshops.

The new catalogue illustrates the range in full and in an attractive, clear and concise way. In addition to the existing favourite models illustrated, you will notice new additions like the 'D4 Roll-Cage', new vertical machine and an entirely new range of LN series silenced compressors. The new brochure has been designed so as to illustrate the many benefits provided to owners of our products, and why ABAC piston compressors are the number one choice in terms of quality, choice, performance and back-up.

Inside this issue:

ABAC Piston Brochure	1
New Rollcage D4	2
ABAC condensate Separators	3
Genesis Streetfighter	4
Screw Compressor Service Kits	5

Special points of interest:

- The World's best sellers- just got better
- D4 Rollcage rolls in
- No more problems with your water
- Genesis - the best and why
- Service made simple - New Kits

Rollcage D4 from ABAC

New model rolls in

ABAC the world's largest air compressor manufacturer has over a long time established a first class reputation for design and innovation. The new Roll-Cage D4 compressor is a further example of this, offering a new concept in design and offering real benefits to the user. Compressors of the carry-frame style have been around for some time and offer a compact and practical solution. The main problem with these machines in the past however, has been a lack of capacity for one, whilst the absence of wheels or a handle impacts on the portability of the machine. Portable receiver mounted machines on the other hand are very portable but take up a lot more space in the work place or vehicle. The new Roll-Cage D4 offers the best of both worlds. The new arrangement offers a compact frame that also fully protects the compressor, however by the positioning the air

receiver within the frame along with the adoption of a clever collapsing truck style handle and wheels, the new Roll-Cage D4 also provides for a completely portable machine. The new model features the D4 compressor until powered by a 2.2kW (3HP) motor delivering a displacement capacity of 300 lt/min (11.1 cfm) and a MWP of 10 bar. The cast iron cylinder and silencing air filter provide durability and quieter operation.

New PUR Condensate Separators

An Investment for the future

Controlling pollutants is an important aspect to the operation of any industrial process. The condensate produced as a by-product of compressed air generation is a toxic and hazardous substance that provides a danger to the environment. As well as environmental concerns, stricter regulation governing the control of this substance combine to provide a real challenge to all users of compressed air, in order to avoid fines and to prevent the release of dangerous material into the environment.

The new PUR range of condensate management systems provides a new solution to a growing problem. By employing new filtration procedures the PUR series provides maximum security along with ease

of use and simple low cost maintenance.

Conventional condensate separators rely on the physical separation/gravitation of the oil from the water so that the oil can be drained separately and the remaining water cleaned through an activated carbon media. This process is adversely affected in cases where vibration or shocks are present and by any turbulence created by an increase in compressed air flow. Furthermore the oil needs to be drained from the system into a container before disposal. Finally over time the water that sits in the primary stage tank becomes stagnant and therefore may present health risks, problems not affecting the new PUR. The range of PUR condensate separators comprises seven models with capacity from 1m³/min (35 cfm) to 70 m³/min (2472 cfm).

New Streetfighter leaflet

The best just got even better!

We are all now familiar with the success of the Genesis compressed air workstation from ABAC with over 3,200 sold in the UK alone. Quite simply we think that the Genesis is the best air compressor package available in its class and our strong market share confirms this. Of course the market changes and new pretenders (competitors) come along, who look to emulate our success with a so called 'same as' product. We must be aware of our competitors certainly, who of course also manufacture good compressors, but we should also be clear that nothing quite manages to challenge the overall appeal of the Genesis range, especially now!

The Genesis is a truly, fully featured compressed air station. Compared to two principle competitors the Genesis comes out on top in so many ways, offering better value and a complete system offer.

Next time your customer says to you that he has been offered a machine the same as the Genesis, show him the guide and explain to him the reasons why the Genesis offers him so much more from his investment and why more people chose Genesis rather than any other compressor in its class.

Feature	Genesis	Competitor A	Competitor B
10 2 full sizes	Yes	No	No
11 Automatic self cleaning	Yes	No	No
12 Variable speed motor	Yes	No	No
13 12 bar work pressure	Yes	No	No
14 12 bar work pressure	Yes	No	No
15 12 bar work pressure	Yes	No	No

New ABAC Screw Compressor Service Kits

Economy with convenience

To allow service managers a more convenient way of both quoting and obtaining ABAC spares, we have now created a full range of service kits based upon the varying service requirements at a given service interval A, B or C service i.e, 2000, 4000 and 8000 hours etc. In addition to the clear documentation for the kits we have also introduced new packaging for ease of identification and added convenience. The new kits also provide a more economical solution, with the price of the kit representing a discount over the price of the individual

spare parts items. Documentation and kits available now, please contact Daryl Masters for further information (daryl@abac.co.uk).
