

ALUP Solo

ALUP SOLO Out on it's own in terms of energy savings, convenience and ultra low noise levels.

The SOLO series of variable speed compressors from ALUP has now been supplemented with the addition of four larger versions in a range now spanning eight models from 5.5kW to 30kW. All SOLO models incorporate direct drive technology in a patented vertical arrangement that also features an encapsulated air end.

The new SOLO models offer very attractive styling, simple convenient service access and the option of integrated dryer and receiver mounted versions on certain models. The new SOLO range achieves significant energy savings

by matching the amount of compressed air generated to the exact requirements of the system and in such a way the SOLO achieves significant energy savings, when compared to normal rotary screw compressors.

The new cabinet design and the employment of efficient sound insulation have resulted in the SOLO's extremely low operating noise levels down to 55 dB(A) which means that all SOLO models can be installed conveniently and at the same time offering a more comfortable working environment.

New leaflet available now, please request copies and look out for dates and details for our forthcoming SOLO launch to be held at our HQ in Bicester during February.

New Clean-Air Range

For applications where clean air is critical

The Clean-air range of oil free compressors for dental and other critical quality applications has been revised and is now presented in a new brochure.

The new range includes 21 different models and is available in 'BASIC' form without silencing, in 'SKY' versions which include a moulded silencing hood and finally in 'SILENT' form, where the complete compressor assembly is housed in an attractive cabinet and offers low noise levels. Capacity ranges 3.1 cfm - 16 cfm (90 lt/min - 460 lt/min). Each compressor is fitted with either; 0.75 kW, 1.5 kW or 1.9 kW pump motor assembly with tandem units featuring

twin 1.5kW or twin 1.9kW units in order to provide additional capacity. All Clean-air compressors are fitted with a proven low rpm coaxial motor and pump assembly which can be fitted to various air receiver configurations.

All Clean-Air compressors can be supplied in derivatives known as 'PLUS' version which includes a fitted adsorption dryer and filtration a further anti-bacterial filter can also be included if required.

The new brochure available on request.

IN THIS ISSUE:

1. ALUP Solo
2. New Clean-Air Range
3. New ABAC 2006 Price List
4. New Variable Speed Formula
5. New High Pressure Models

For further information on any of our product ranges please contact our Sales office on Tel: 01869 326226 or visit our website: www.abac.co.uk

New ABAC 2006 Price List

The new ABAC 2006 Price List has now been released with sixteen pages that encompass the UK's widest range of compressed air equipment.

The new price list has been designed to be attractive and easy to use and includes specification and other details on every product in the ABAC range.

Several additional new products have been added to the New Price List, including Red-Line economy models, 'Trade-Line' 110 volt models, Silenced belt drive compressors, Clean-Air dental range, additions to the Genesis series including new variable speed versions, oil-water separators and new ALT series high pressure and breathing air compressors plus many other new additions.

Please look out for your new 2006 Price List. For further copies please contact us.

New Variable Speed Formula

New variable speed Formula compressor

The existing Formula range of compressors from ABAC has been supplemented with the addition of two new larger models both at 37kW and each with variable speed and direct drive arrangement. The new Formula 37DI and Formula 37EDI, both feature energy saving variable output. The direct drive arrangement further enhances the energy saving credentials of the new machine which can be specified as a standard

machine (Formula 37 DI) or as a full featured machine incorporating integral refrigerated air dryer and filtration (Formula 37 EDI). The new models are attractively styled and features very low noise levels and simple maintenance.

A brochure illustrating the new models is available on request.

New High Pressure Models

ALT Series reaches new heights

The ABAC range of high pressure and breathing air compressors have been revised and expanded. The range now offers twelve models with a choice of electric motor, petrol or diesel engine drive. The popular ALT 80 model operating from a single phase power supply has been updated making the machine perfect for smaller and portable applications. The new ALT series also includes two larger new models powered by a 15kW (20HP) motor and delivering 585 litres/min (20.66 cfm). The new larger model is also available as either a standard machine or silenced. All machines are capable of operating at either 225 bar or 300 bar as standard and are fitted with molecular sieve and a/c filtration providing air quality to GGA E, DIN 3188 and EN12021. A feature of the ALT series machines is the extended service life to the filter cartridges with change required at 50 hours compared to as little as 16 hours with competitors products. Standard machines are now available from stock and data sheets/leaflets for each model are available on request.
